

# Instruction Manual V1.0

1. Please prepare a micro sd card and make it formatted with windows OS.
2. Download the R5tool software and save it to your PC, and decompress the files to the same folder, make sure you can see the both files – DiskWriter.exe and template.txt.

Note: Net Framework 4.0 is required for running DiskWrite, you can download and install from [here](#).

3. Run DiskWriter.exe as administrator ID, a window of drive select will pop on, please make sure select the exactly drive that the micro sd card you prepared, then click “Go”.

(it's very important!! If you choice wrong drive, the drive will be formatted and all data will be lost !), meanwhile a warning windows will appear out, please click “Yes” to go ahead.

4. The DiskWriter window will be shown out like below image, the bottom message shows “0 Mb”, click Files → Format to format the micro sd card, meanwhile there are 2 warning windows will pop out and you can just click yes to go ahead for formatting card,

while the processing is finished, please check the bottom message again, it should show the correct capacity of micro sd card.

5. Now you are ready to start loading backup rom to your sd card, just click Files → Write, it opens file manager window for file selection, go to the folder of your backup rom, you can multi-select the roms to make batch uploading to your card to save your time, but be noted: **the R5 support 10 backup roms totally, keep the record and write down to somewhere keep it safe.**

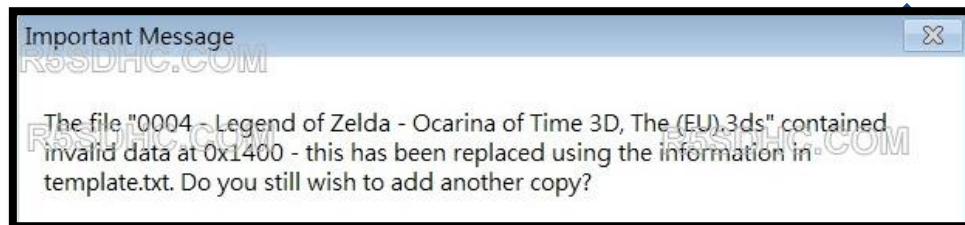

6. Before uploading processing, DiskWriter will check the selected roms one by one, and you should see 2 kinds of message:

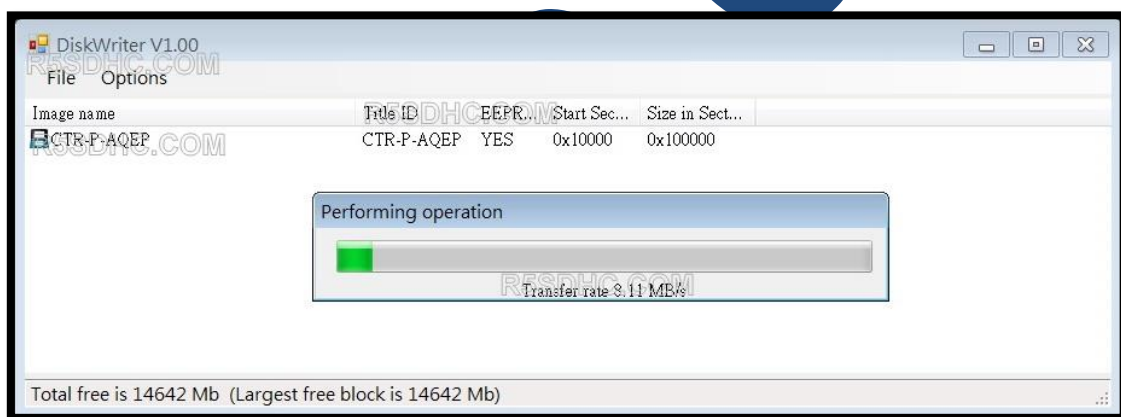

- It's meaning the rom doesn't including in the template.txt files, you cannot upload this rom at the moment, R5 team will update template.txt file to include more roms.

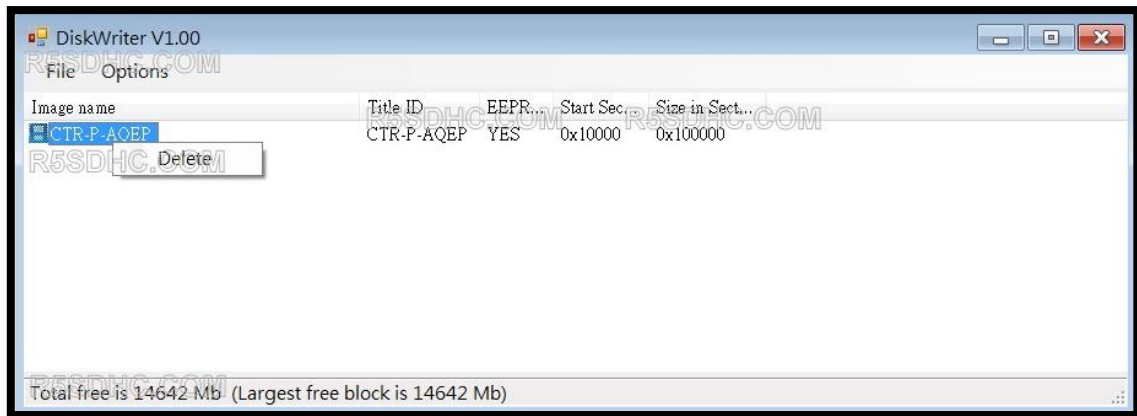

- It's meaning the rom can be uploaded to sd card, and need to confirm it again if the rom title is correctly (remember that the R5 can only support to run 10 title of backup rom), and click "Yes" to go ahead or "No" to cancel upload this rom.

After checking all roms you selected, DiskWriter will auto start uploading processing, when uploading done then please close the DiskWriter and remove sd card out.

7. Delete rom: just choice the rom and click right button of mouse and click delete, a warring message will pop out, if you want to confirm to delete this rom then click "Yes" otherwise click "No" to cancel order.

8. Next step: Plug in the sd card to R5 smoothly and carefully, and then insert R5 to the console as normal, the blue led of R5 will be blinking for seconds at first time, and the backup rom will auto run as normal on console, if you see nothing on console, please un-plug and re-plug R5 again.
9. And how to change rom? To change rom by simple clicking the switch button of R5 one time, after clicking the button you can see the blue led light on and then go blinking, when led stop blinking, the R5 will run into next rom automatically. (if you click the button incautious more than one time, the blue led will keep flashing, please just un-plug and re-plug the R5 again)

Enjoy!!
