

# USB V1.1 programs update instruction

We improve the MT card hardware, jut update the MT yellow card (white) to solve the TF card compatibility problem and fix “game card has been removed” error.

Download the programs from <http://www.mt-card.com/Downloads.html>

You need a Micro USB cable

Operation as below:

1. Run the udpate programe on the computer

2. Connect the Micro USB cable(tiny) to the USB port of Yellow MT card(white), make sure it is in the right direction
3. Connect the USB cable(big) to the computer USB port, then MT CARD blue LED is light, and “update” button of the programs is available

4. Press “update”, pop-up dialog box “do you want to update your MT card firmware from ver.1.0 to ver. 1.1?”

5. Press “Yes” to continue the update, while updating, don’t pull out the MT card from the USB cable, don’t pull out the USB cable from the computer, don’t power off the computer, or your MT card might be damage.
6. Update success, there will comes a dialog box, see as below, press ‘OK’ to confirm firmware update.

Caution! When you are on the process of step 5 by pressing “Y”, don’t pull out the MT card from the USB cable, don’t pull out the USB cable from the computer, don’t power off the computer, please wait till update success, or your MT card might be damaged.

If the USB cable is connecting, and MT Card LED turns constant blue, but the programe “update” is not available, it meams that the MT Card has not been connected to the computer, try to use another USB cable.
