

# User Manual of MT Card Ver1.1

1. Download Launcher.dat Ver. 1.1 from <http://www.mt-card.com/Downloads.html> , unzip file first and then transfer launcher.dat to SD card, insert the SD card into the console, switch on the console.
2. Here on the console screen, select "system settings", then "other settings", and then "profile", and lastly "nintendo DS profile"(Press L button).

4. Enter into MT card menu

- 5.
- 
- Function of "Go MT card Menu": Select this option, press "A" to exit, rom and high version games can be played on 3DS. Insert the MT card into the console ,then you can switch games by pressing MT card built-in key

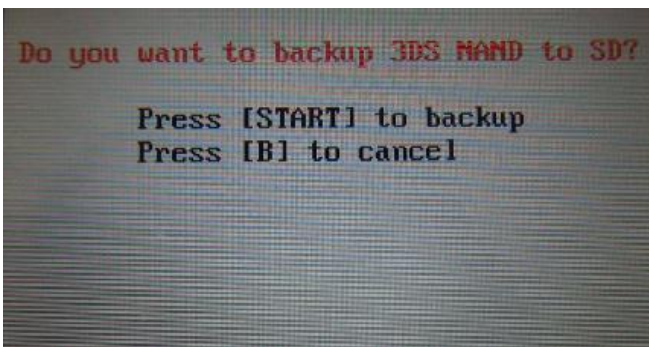

6. Function of "Go Classic Menu": Select this option, press "A" to exit, games of official cart supported, and after updating virtual system with version 7.1, all games of official carts supported, and region free!

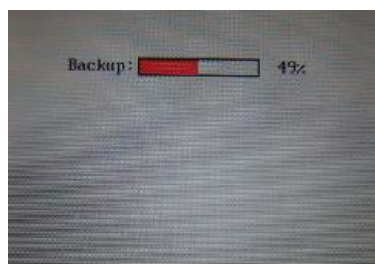

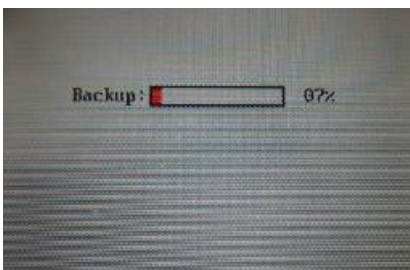

7. Function of "Select Game": Select this option, press "A" . press "up" and "down" for files selecting, press "right" and "left" for page up and page down, then press "A" to confirm the selected files and then exit.

8. Function of "Backup Nand": Select this option, press "A" to backup.

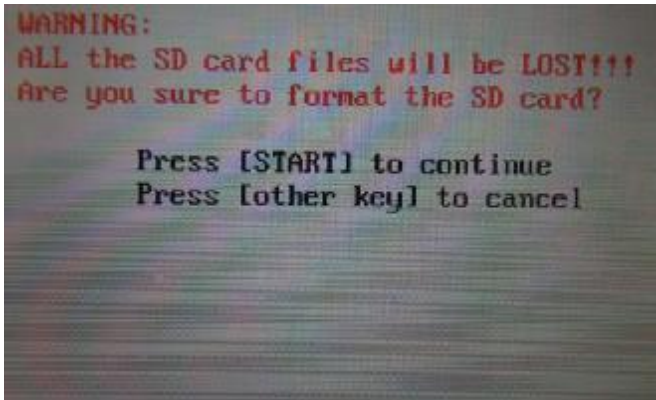

Press "B" to cancel, press "START" to backup.

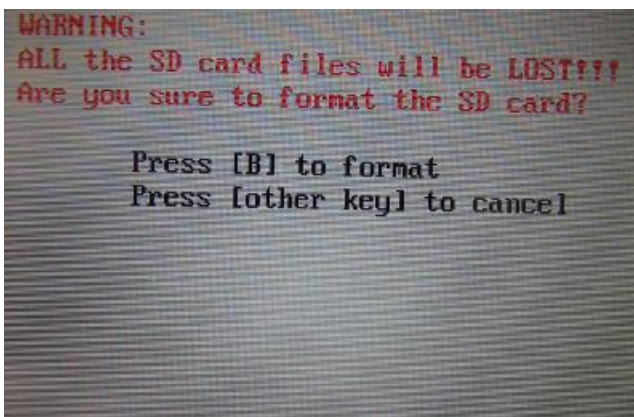

When the progress bar is up to 100%, pop-up green letters "finished", then press "A" or "B" to exit.

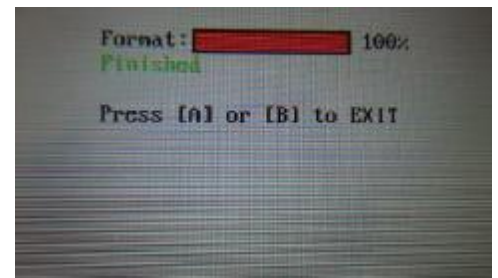

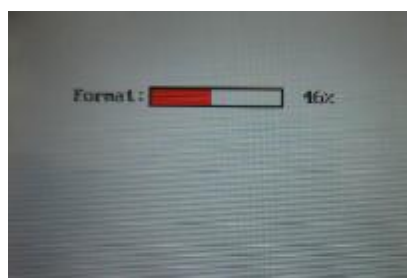

9.  Function of “Format Emu Nand”: select this option, press “A” to format Nand

press START to continue , press other key to exit.

Press B to format the SD card, and all files on SD card will be lost.

When the progress bar is up to 100%, pop-up green letters”finished”, then press “A” or “B” to exit.

10. Regarding to the NAND-emulate system updatable function: Follow step 1 to step 4, as above mentioned, then go MT card menu, press A to exit, and back to “System Settings” to check the system version.

For system version "MT3D X.X.X-XX", system is updatable, but it must be finished under "system setting" interface, select "system update", turn on Wifi to update the system according to the instruction. You can just update the virtual system under "system setting" interface. If to update the NAND-emulate system under "Eshop" interface, the console system will be with update version over 4.5, MT card could work on that.

11. About Eshop: When NAND-emulate system update finished, follow step 1 to step 4, as above mentioned, then go MT card menu, press A to exit, then go Eshop, it works with no problem, if system reminds you new system update available when you are on Eshop, just ignore it and follow instruction of step 10 for system update installation.
